

Assignment:

Add a feature to your collection project that allows it to read items listed in a CSV file into the collection. Do you remember the spreadsheet you made on the first day of class last semester? I do. (And I can get yours to you if you attached it to that day's activity and don't have it anymore.)

You will want to look at the animal-monitoring project from Chapter 5. Specifically you'll want to see how the SightingReader class does its work. You should probably bring that class into your project, then modify it (including its name) to fit the needs of this collection.

Related Learning Outcome:

H 14.2: Write code to read a text file
J 14.1: Write code to throw an exception
J 14.2: Write a try/catch block
J 14.3: Write code to use files
